Heaviest Mackerel
H.P.S Tuna
H.P.S Trevally/Queenfish
H.P.S Cobia
H.P.S Fish on Fly
H.P.S Coral Trout or Lutjanus
H.P.S Sportfish other
H.P.S Shark

Longest Barramundi
Longest Threadfin Salmon
Longest Mangrove Jack
Longest Trevally

Selected tagged fish can be nominated for the Capture section for a predetermined amount of points

Minimum length 1.3m Fork to lower jaw

Hammer Head	500 points
Tiger Shark	500 points
Marlin	600 points
Sailfish	400 points

- Tag information must be submitted to tagging co-coordinator maximum 30 days from date of capture to count for club points. Except June Tagging information must be submitted by 1st July
- This also includes any weigh sheets to be included in the Capture section must be handed to the weigh master maximum 30 days from the date of capture for club points. Except June where all information must be submitted by 1st July
- Species indicated with a “*” should be tagged with NSW Fisheries tags only. DO NOT use the ANSA WA tags to tag these species.
- There is no restriction on gear type used to capture the fish i.e. 100lb hand line is acceptable for tagging, this is to ensure maximum chance of survival.

- It is promoted to tag fish under that of the “minimum length”, as long as the fish has a good chance of survival. The minimum length is only relevant for club points.
- Both overall AND fork length are required to be noted on tagging sheets for Threadfin salmon (King and Blue).
- If tagging Black Jewfish it is important that a correct identification is made. There is a particular species that looks very similar that only grows small length. This can cause some confusion as they could be misidentified as a juvenile Black Jewfish. These should not be tagged.
