Mangrove Jack	5	300		
Threadfin Salmon Blue	5	500		
Shark Tiger*	10	NA		500 capture points
Shark Great Hammer Head*	10	NA	 NSW-DPI Steel Head Shark Tag	
Cobia*	10	500	 NSW-DPI Pelagic Tag	

[^]Only Species on this list count towards the NBSFC Annual TR Challenge, this list has been adapted over time from the full ANSA Species List. The Annual TR Challenge promotes research and conservation of fish species resident in our local waters. Changes to the Annual TR Challenge Species List and/or Annual Challenge rules are proposed & reviewed by members at the Club Awards Night.

NBSFC Tag & Release [TR] rules for Annual TR Challenge Club points

TAGS are a valuable Club resource, issued by the Tag Master at his/her discretion. Their correct use and recording is the responsibility of all Club members participating in the Annual TR Challenge. Club members agree that all tags issued must be accounted for and that any unused tags shall be returned immediately to the Tag Master on request, or when a Club member ceases to participate in the Annual TR Challenge.

Tagging information must be submitted to the Tag Master a maximum of 30 days from date of tagging to count for Annual Tag & Release Challenge Club points. Except June tagging information which must be submitted by 1st July.

Members who wish to claim Annual Capture Challenge [CC] Points for a tagged species **instead** of TR Points. Must clearly write "Capture" on the address side of the correctly completed tag card submitted to the Tag Master.

Species indicated with a "*" should be tagged with NSW Department of Primary Industries [DPI - Fisheries] tags only. DO NOT use ANSA WA tags on these species.

There is no restriction on gear type used to catch a fish to be tagged i.e. a 100lb hand line is acceptable for tagging, this is to promote the maximum chance of fish survival.

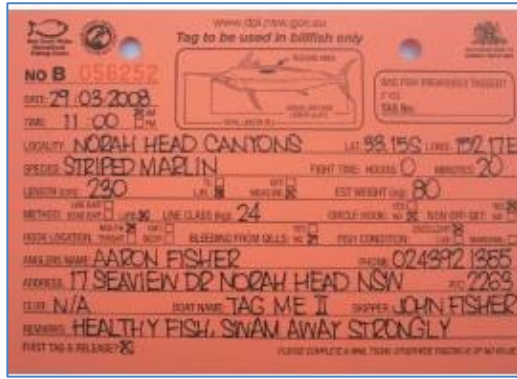

It is recommended to tag fish under the "minimum length", as long as the fish has a good chance of survival. The minimum length is only relevant for Annual TR Challenge Club points.

Both **overall & fork length** must be noted on tagging sheets for Blue & King Threadfin Salmon.

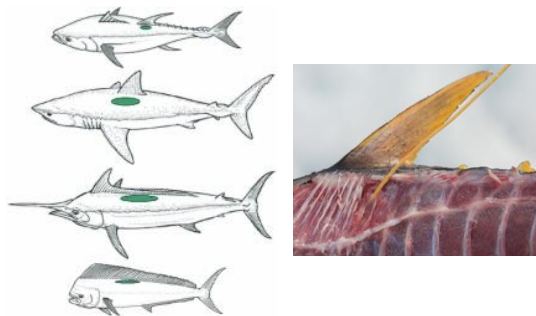

++ When tagging Black Jewfish it is important that a correct identification is made. DO NOT confuse Juvenile Black Jewfish with adult Bearded Jewfish [Johnius amblycephalus] which only grow to ~25cm. Bearded Jewfish are not to be tagged. See detail this page.

OFFICIAL NBSFC Measure Boards
Measure it on one of these or it
DOESN'T Count!
\$30 @ Club Meetings

Above: Billfish Tag Card filled in **CORRECTLY**
Note: Lat & Long to **.003** decimal places.
Below: Where to Tag these species.

Above: Ryan Turner [RT] shows how to support an Adult Black Jewfish to be photographed, tagged & released.

Below Left & Bottom Right: **Juvenile Black Jewfish** [Protonibea diacanthus]
Bottom Left: **Adult "Bearded Jewfish"** [Johnius amblycephalus]

++DO NOT confuse Adult Bearded Jewfish with Juvenile Black Jewfish.
